

Dear Investor,

It's an exciting time to be in the renewable energy space in South Africa! Last week, President Cyril Ramaphosa raised the threshold for private companies to produce or purchase power up to a capacity of 100 MW, which promises to revolutionise energy production in the country.

With our robust pipeline of projects and powerhouse team, Decentral Energy is strategically positioned to take full advantage of these new developments.

AN EXPERIENCED TEAM

It's the perfect time to invest in clean energy in South Africa. With Decentral Energy, you're in safe hands. From Executive Directors Christian Bode and Luel Culwick to Non-Executive Directors Elekanyani Ndlovu, Ben Potter, and Nick van Rensburg, our team has deep energy and investment experience, with a proven track record of successfully bringing projects to completion and securing investor returns.

And you can be sure that they have the best interests of Decentral investors at heart: in fact, some of the team are themselves investors, and will be investing further in this round.

Read more about each of our team members in our [investor brochure](#) or on our [website](#).

And remember: there are only twelve days left to invest in Decentral Energy Capital's Section 12J clean energy fund (deadline **30 June 2021**).
